

Inventory by location count and date FINET quick reference guide

Introduction

When dealing with inventory, it is important to know the quantity you have and where it is located. This information is available through the Inventory by Location table (**ILOC**).

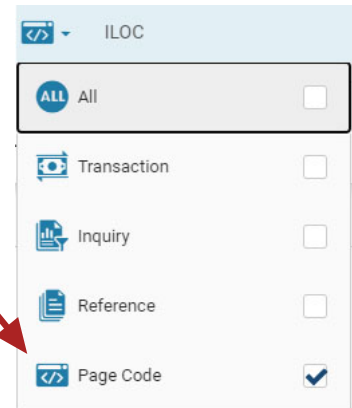

It is also important to establish a baseline when assessing the accuracy of the inventory numbers.

Now, located on the ILOC table, two new fields were included. They are the **Last Count** and the **Last Count Date**. This helps the user know how fresh the last verification is.

Note: these fields did come in with an interim update, but they are official for this feature set release.

Instructions

From the FINET search, in the **ALL** search button, click the drop-down and change the search to **Page Code**.

In your updated search bar, you can now type **ILOC** to locate the Inventory by Location screen.

The new fields are located in the lower right corner of the ILOC page.
